

Alkaline Filter

Our alkaline water filters create premium quality water with a pH above 9.0 with optimal alkaline mineral content allowing you to harness the full health benefits of consuming alkaline water. The solutions have been tested and proven to consistently produce alkaline water above 9.0 pH (varies slightly depending on water conditions).

Alkaline water is not only beneficial to consume, but can be a very profitable addition to water retailers ranging from water stores to bottled alkaline water operations. Alkaline water often sells at prices 3 times higher or more than standard purified water. Alkaline water has been in high demand in health conscious areas for years, but the domestic and international demand for alkaline water has increased significantly making it highly demanded in many markets. Our alkaline water solutions are priced much more affordably than other manufacturers making them a cost effective solution to dramatically increase profits.

Water Business USA has taken a modified approach to making alkaline water by adding alkaline minerals back into purified water to raise the pH and alkalinity of the water. With our alkaline water filter, you can create alkaline water by adding alkaline minerals to pure water, eliminating the possibility of harmful contaminants and making the cleanest alkaline water possible. These type of alkaline water solutions are best suited for retail water operations such as water stores and bottled alkaline water plants.

| Model | Gallons Per Minute | Size |
|--------|--------------------|-------------|
| Alka-1 | 5 | 1.0 cu. ft. |
| Alka-2 | 10 | 1.5 cu. ft. |
| Alka-3 | 15 | 2.0 cu. ft. |
