

Sachet Machine

Water Business USA offers a high quality and reliable water pouch (sachet) filling and packaging machine that is capable of producing between 1,500-2,200 sachets per hour. It can be adjusted to fill sachets or pouches ranging from 200-500mL.

The auto sachet water pouch packing machine fills the sachet with water then uses a heat-sealing system to ensure that the filled sachet does not leak water. Heat-sealing also ensures that there are no adhesives, glues, or resins used to seal the bag, preventing any possible contamination from sealing. The heat-sealing system uses thermal transverse vertical sealing to seal the bag. It is designed to use either plastic polyethylene (PE) or composite film with the film being printed with logos or without.

The water sachet packing machine features a date coder which laminates the date of production on the bag. It also features automatic counting to track the number of bags produced by the machine.

This water pouch packaging machine uses UV sterilization when filling the sachets to prevent any possible contamination. The sachet filling machines are manufactured in China and built to our specifications.

Specifications:

Production capacity: 1,500-2,200 bags per hour
Filling range: 200-500mL
Voltage: 220v/380v 1.8kw
Film width: 320/240mm
Packing dimension: 40"L x 36"W x 80"H
Gross weight: 880lbs.

Features:

Pouch/sachet forming, filling, and sealing
UV sterilization
Thermal vertical sealing
Date lamination
Linear bag traction
Quantitative filling
Thermal transverse sealing
Bag cutting
Automatic counting

Parts included:

High-temperature cloth
Heater
Transverse sealing strips
Vertical sealing strips
West Buddha bar
Allen wrench set
Screwdriver
Open-end wrench
Membrane ottomans

Sachet Film

The film used is a food-grade plastic polyethylene. It is best to find a local plastic manufacturer to supply the film for you. Most manufacturers offer custom printing of your business name or logo.

Film Specifications:

Width: 240-320mm
Height: 60-150mm depending on desired volume
Sheet thickness: 0.07-0.08mm
